DrawnCamera

Look stunning on every call.

DrawnCamera is a virtual camera for Windows 11 that changes your background and your look live, in Zoom, Teams, Google Meet, Discord, OBS and any other app that uses a camera.

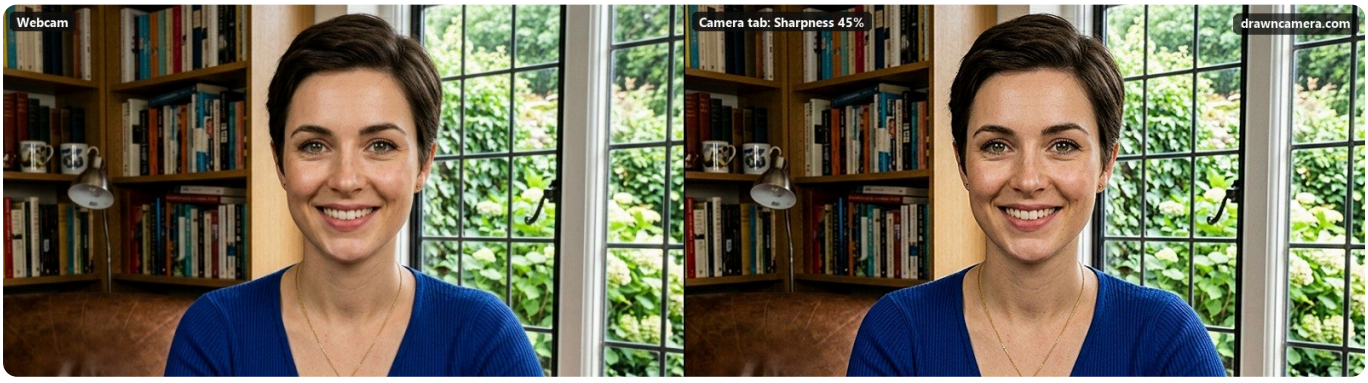

The room drawn as anime, the person stays as they are.

Most video calls show the same tired webcam picture. DrawnCamera sits between your webcam and every app that uses it. You choose "DrawnCamera" as the camera once, and the app does the rest. Everything runs live on your own graphics card, with no driver and no cloud. No NVIDIA card is needed: AMD and Intel graphics work too.

Tune your webcam

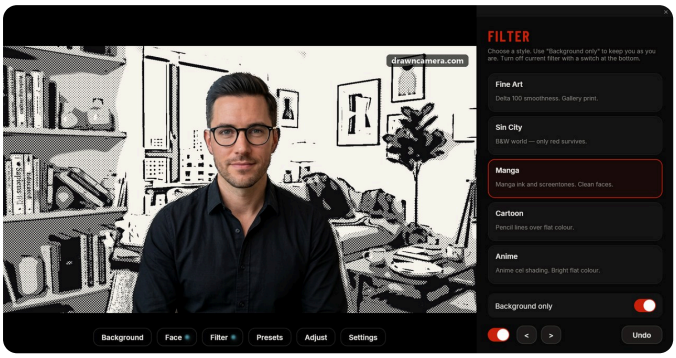

Adjust has two tabs. Camera tunes the picture from your webcam itself, for every preset: sharpness for cheap webcams with fixed focus, and hue, saturation, brightness and contrast for poor lighting. Image tunes the filtered look and can be saved in a preset. All adjustments are free.

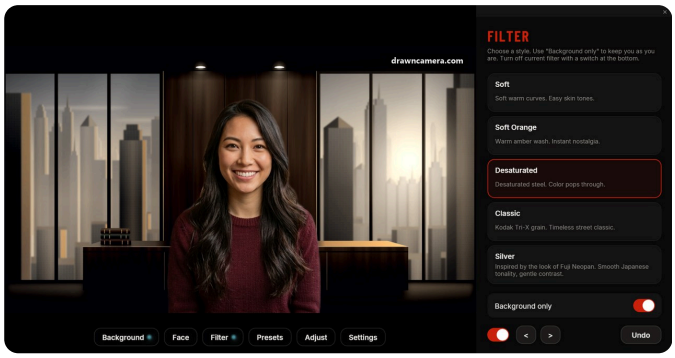

The webcam picture, then Sharpness 45% on the Camera tab.

Change the room, stay yourself

Dozens of filters range from film and cinema grades to anime, manga and comics. "Background only" applies a filter to the room while you stay exactly as you are. The room can also go soft like a portrait lens, with blur, bokeh or Bokeh behind, a lens blur on the room only. It can turn into a library or an office, or be your own picture or video.

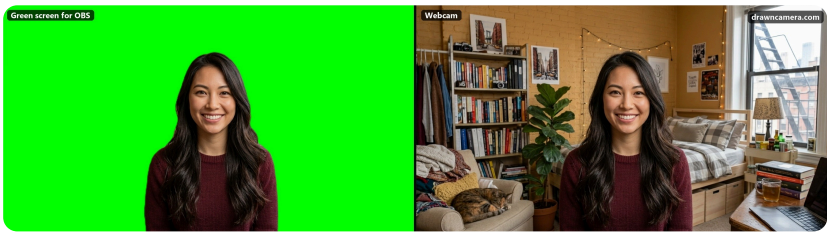

The Manga filter on the room only.

Office background, Desaturated on the room only.

Green screen for OBS

One click puts a clean green screen behind you, ready for chroma key in OBS.

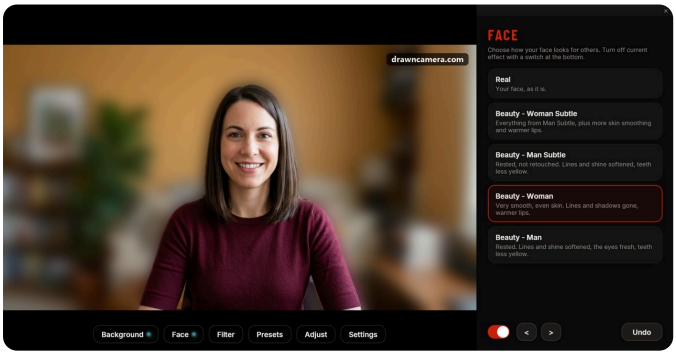

A subtle retouch

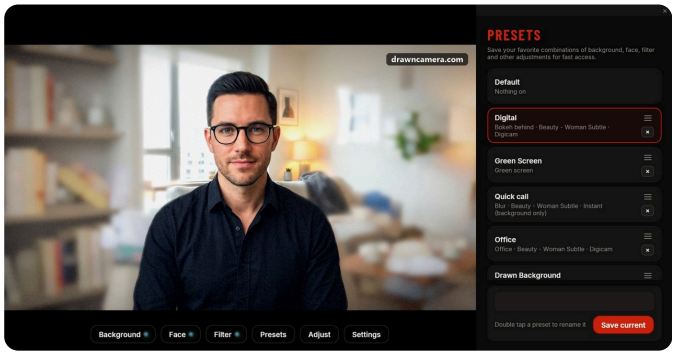

A subtle skin retouch for women and men keeps you looking like yourself on a good day. Stronger beauty looks are there too.

Presets

Ready-made combinations of background, face and filter, and your own saved in one click. Switch between them mid-call from the tray menu.

The beauty look for women, with a blurred room behind.

Short description

> DrawnCamera turns any webcam into a better one. Choose "DrawnCamera" as your camera in any video call app and improve the picture of whatever webcam you have: fix soft focus with sharpness, adjust brightness, saturation and much more. Blur or replace your background, add a film, anime or manga look, apply subtle face retouching. Everything runs on your own PC, no cloud. Free plan available.

Facts

Works in	Zoom, Microsoft Teams, Google Meet, Discord, OBS and any app that uses a camera
Free plan	No time limit: the camera, blur, bokeh, Bokeh behind, green screen, the subtle face retouch, the image adjustments, and the Portrait and Digicam filters, with no watermark. Premium looks work too, with a small watermark
